

Rishabh Shrivastava

Full Stack Consultant | Node.js | React | AI-Driven Systems Engineer

Indore, India • rishabhshrivastava205@gmail.com • +91 7223028034 • www.linkedin.com/in/rishabh-shrivastava-2973671a1

SUMMARY

Dynamic Full Stack Developer with over three years of experience in crafting scalable, high-performance enterprise applications using Node.js and React.js. Strong expertise in system design, microservices architecture, RESTful API development, and cloud-based solutions on AWS. Skilled in integrating AI-driven technologies, including OpenAI, conversational AI, and voice automation platforms, to develop real-time, data-intensive applications. Proven track record of collaborating effectively with stakeholders to deliver secure, business-driven technology solutions within Agile environments.

CORE COMPETENCIES

Full Stack Development | Node.js | React.js | System Design | Microservices Architecture | REST APIs | GraphQL | API Integration | Cloud Deployment | AI Integration | Scalable Applications | Distributed Systems | Agile & Scrum

SKILLS

Programming Languages: JavaScript (ES6+), TypeScript

Frontend: React.js (Component-Based Architecture, State Management)

Backend: Node.js, Express.js, NestJS

Architecture & APIs: Microservices, REST APIs, GraphQL, Server-Sent Events (SSE), MVC

AI & Integrations: OpenAI, Groq, Deepgram, ElevenLabs, Twilio, Plivo

Databases: MongoDB, PostgreSQL, MySQL

Cloud & DevOps: AWS (S3), Docker, CI/CD Pipelines, Git (GitHub, GitLab, Bitbucket)

Security: JWT, OAuth, Multi-Factor Authentication (MFA), RBAC

Tools & Testing: Postman, Swagger, Puppeteer, Jest, Mocha, Chai

Concepts: Data Structures & Algorithms, System Design, Scalable Systems, Distributed Systems

EXPERIENCE

Software Engineer – AI & Full Stack Systems

Apr 2024 – Present

VoiceOwl AI | Indore, In

- Engineered and implemented scalable backend systems utilizing Node.js, Express.js, and NestJS to enhance performance for over 150,000 daily active users.
- Influenced system design and architecture decisions for distributed high-performance applications.
- Designed robust real-time analytics pipelines leveraging server-sent events (SSE) to optimize user experience for more than 5000 concurrent users.
- Implemented AI and voice technologies, including OpenAI, Deepgram, ElevenLabs, and Twilio, to enhance conversational automation capabilities.
- Architected and deployed advanced authentication solutions leveraging JWT, OAuth, MFA, and RBAC, ensuring compliance with enterprise security standards.
- Architected and presented RESTful APIs in compliance with OpenAPI standards, facilitating seamless interactions for 15+ enterprise clients.
- Built scalable campaign automation systems processing 200K+ monthly records.
- Integrated and developed third-party APIs for FinTech clients (BPCL, Cognizm) for secure transactions.
- Led full-stack development initiatives, collaborating with React.js teams to ensure seamless end-to-end delivery.
- Configured and managed cloud-native infrastructure using AWS S3 and Cloudinary, achieving 99.9% uptime.
- Designed and executed Puppeteer-based automation workflows, achieving a significant reduction in manual tasks by 40%.
- Facilitated collaboration among cross-functional teams in agile environments to drive timely delivery of 8+ releases per quarter.

Node Js Developer – Full Stack & Microservices

Feb 2023 – Mar 2024

MoreYeahs | Indore, India

- Designed and implemented microservices architecture to efficiently manage over 2 million daily API requests.
- Developed robust REST APIs and integrated Stripe payment gateway, optimizing transaction management for annual revenue exceeding \$3 million.
- Orchestrated containerization of applications utilizing Docker and established CI/CD pipelines to enhance deployment efficiency.
- Revamped legacy systems utilizing NestJS architecture to boost performance and ensure maintainability.
- Configured and integrated JWT and RBAC for robust authentication solutions, ensuring secure user access management.
- Partnered with frontend (React.js) teams to drive delivery of over 20 enterprise features.

Node Js Intern

Dec 2022 – Jan 2023

Codesid | Indore, India

- Architected scalable backend infrastructure leveraging Node.js and MongoDB to optimize system functionality and reliability.
- Engineered Puppeteer-based automation workflows to enhance data scraping and streamline testing operations.

PROJECTS

VoiceOwl AI – Full Stack AI Communication & Analytics Platform

Apr 2024 – Present | Indore, India

Tech Stack: Node.js (Express.js, NestJS), React.js (Integration), MongoDB, AWS S3, Cloudinary, OpenAI, Twilio

- Engineered and maintained **multiple scalable backend modules (Authentication, Admin, Campaign, Partner, Agentic Flow, Consumer, Billing, Post Call Analysis (PCA))** for an AI-driven communication platform using Node.js and MongoDB.
- Designed and implemented **secure authentication architecture** with **JWT, role-based access control (RBAC), and multi-factor authentication (MFA)** including OTP, authenticator apps, and biometric login.
- Developed a **super-admin portal** to manage **10,000+ clients and users**, significantly improving administrative efficiency and operational control.
- Built a **campaign management system** enabling automated voice campaigns, bulk contact uploads, bot configuration, and real-time reporting.
- Designed and exposed **scalable RESTful APIs and Partner APIs**, enabling seamless third-party integrations without requiring dedicated front-end systems.
- **Integrated third-party APIs for fintech clients (including BPCL and Congizm)** to enable secure data exchange, transaction workflows, and system interoperability.
- Leveraged **AWS S3 and Cloudinary** for scalable media storage and optimized file handling across distributed systems.
- Implemented **real-time analytics using Server-Sent Events (SSE)** to deliver live campaign insights with low latency.
- Conducted **API testing and validation using Postman and Insomnia**, ensuring high reliability and performance.
- Collaborated with cross-functional teams while independently delivering features, demonstrating strong **ownership, problem-solving, and Agile execution**.

AgriSoft – Automation & Data Processing Platform

Oct 2023 – Mar 2024

Tech Stack:: Node.js, Puppeteer, MongoDB, Cloudinary, REST APIs

- Developed an automation engine for bulk data processing, enabling multi-user login and large-scale form submissions using Puppeteer.
- Engineered data extraction pipelines from Excel files, improving processing efficiency and reducing manual effort by significant margins.
- Integrated Cloudinary for secure cloud storage, ensuring efficient file management and accessibility.
- Implemented third-party CAPTCHA solving services, enabling seamless and uninterrupted automation workflows.
- Designed dynamic data validation and Excel generation modules, ensuring high data accuracy and integrity before execution.
- Built an automated reporting system providing detailed insights on success rates, failures, and error tracking, improving operational visibility.

Digisparsh – HealthTech Workflow & Billing Platform

May 2023 – Sep 2023

Tech Stack: Node.js, Express.js, MongoDB, REST APIs

- Developed and integrated **scalable backend modules for healthcare workflows**, supporting patient, pharmacy, and admin operations.
- Built **secure authentication and authorization systems (JWT, RBAC)** to ensure controlled access across multiple user roles.
- Refactored and optimized legacy codebase, improving **application performance, scalability, and maintainability**.
- Designed and implemented **dynamic billing and invoice generation systems**, aligned with real-time healthcare transactions.
- Developed **multi-level approval workflows** for prescriptions, billing, and partner onboarding, enhancing compliance and operational control.
- Integrated multiple **RESTful APIs across services**, ensuring seamless data flow and improved system efficiency.
